

MY P2P WEDDINGS

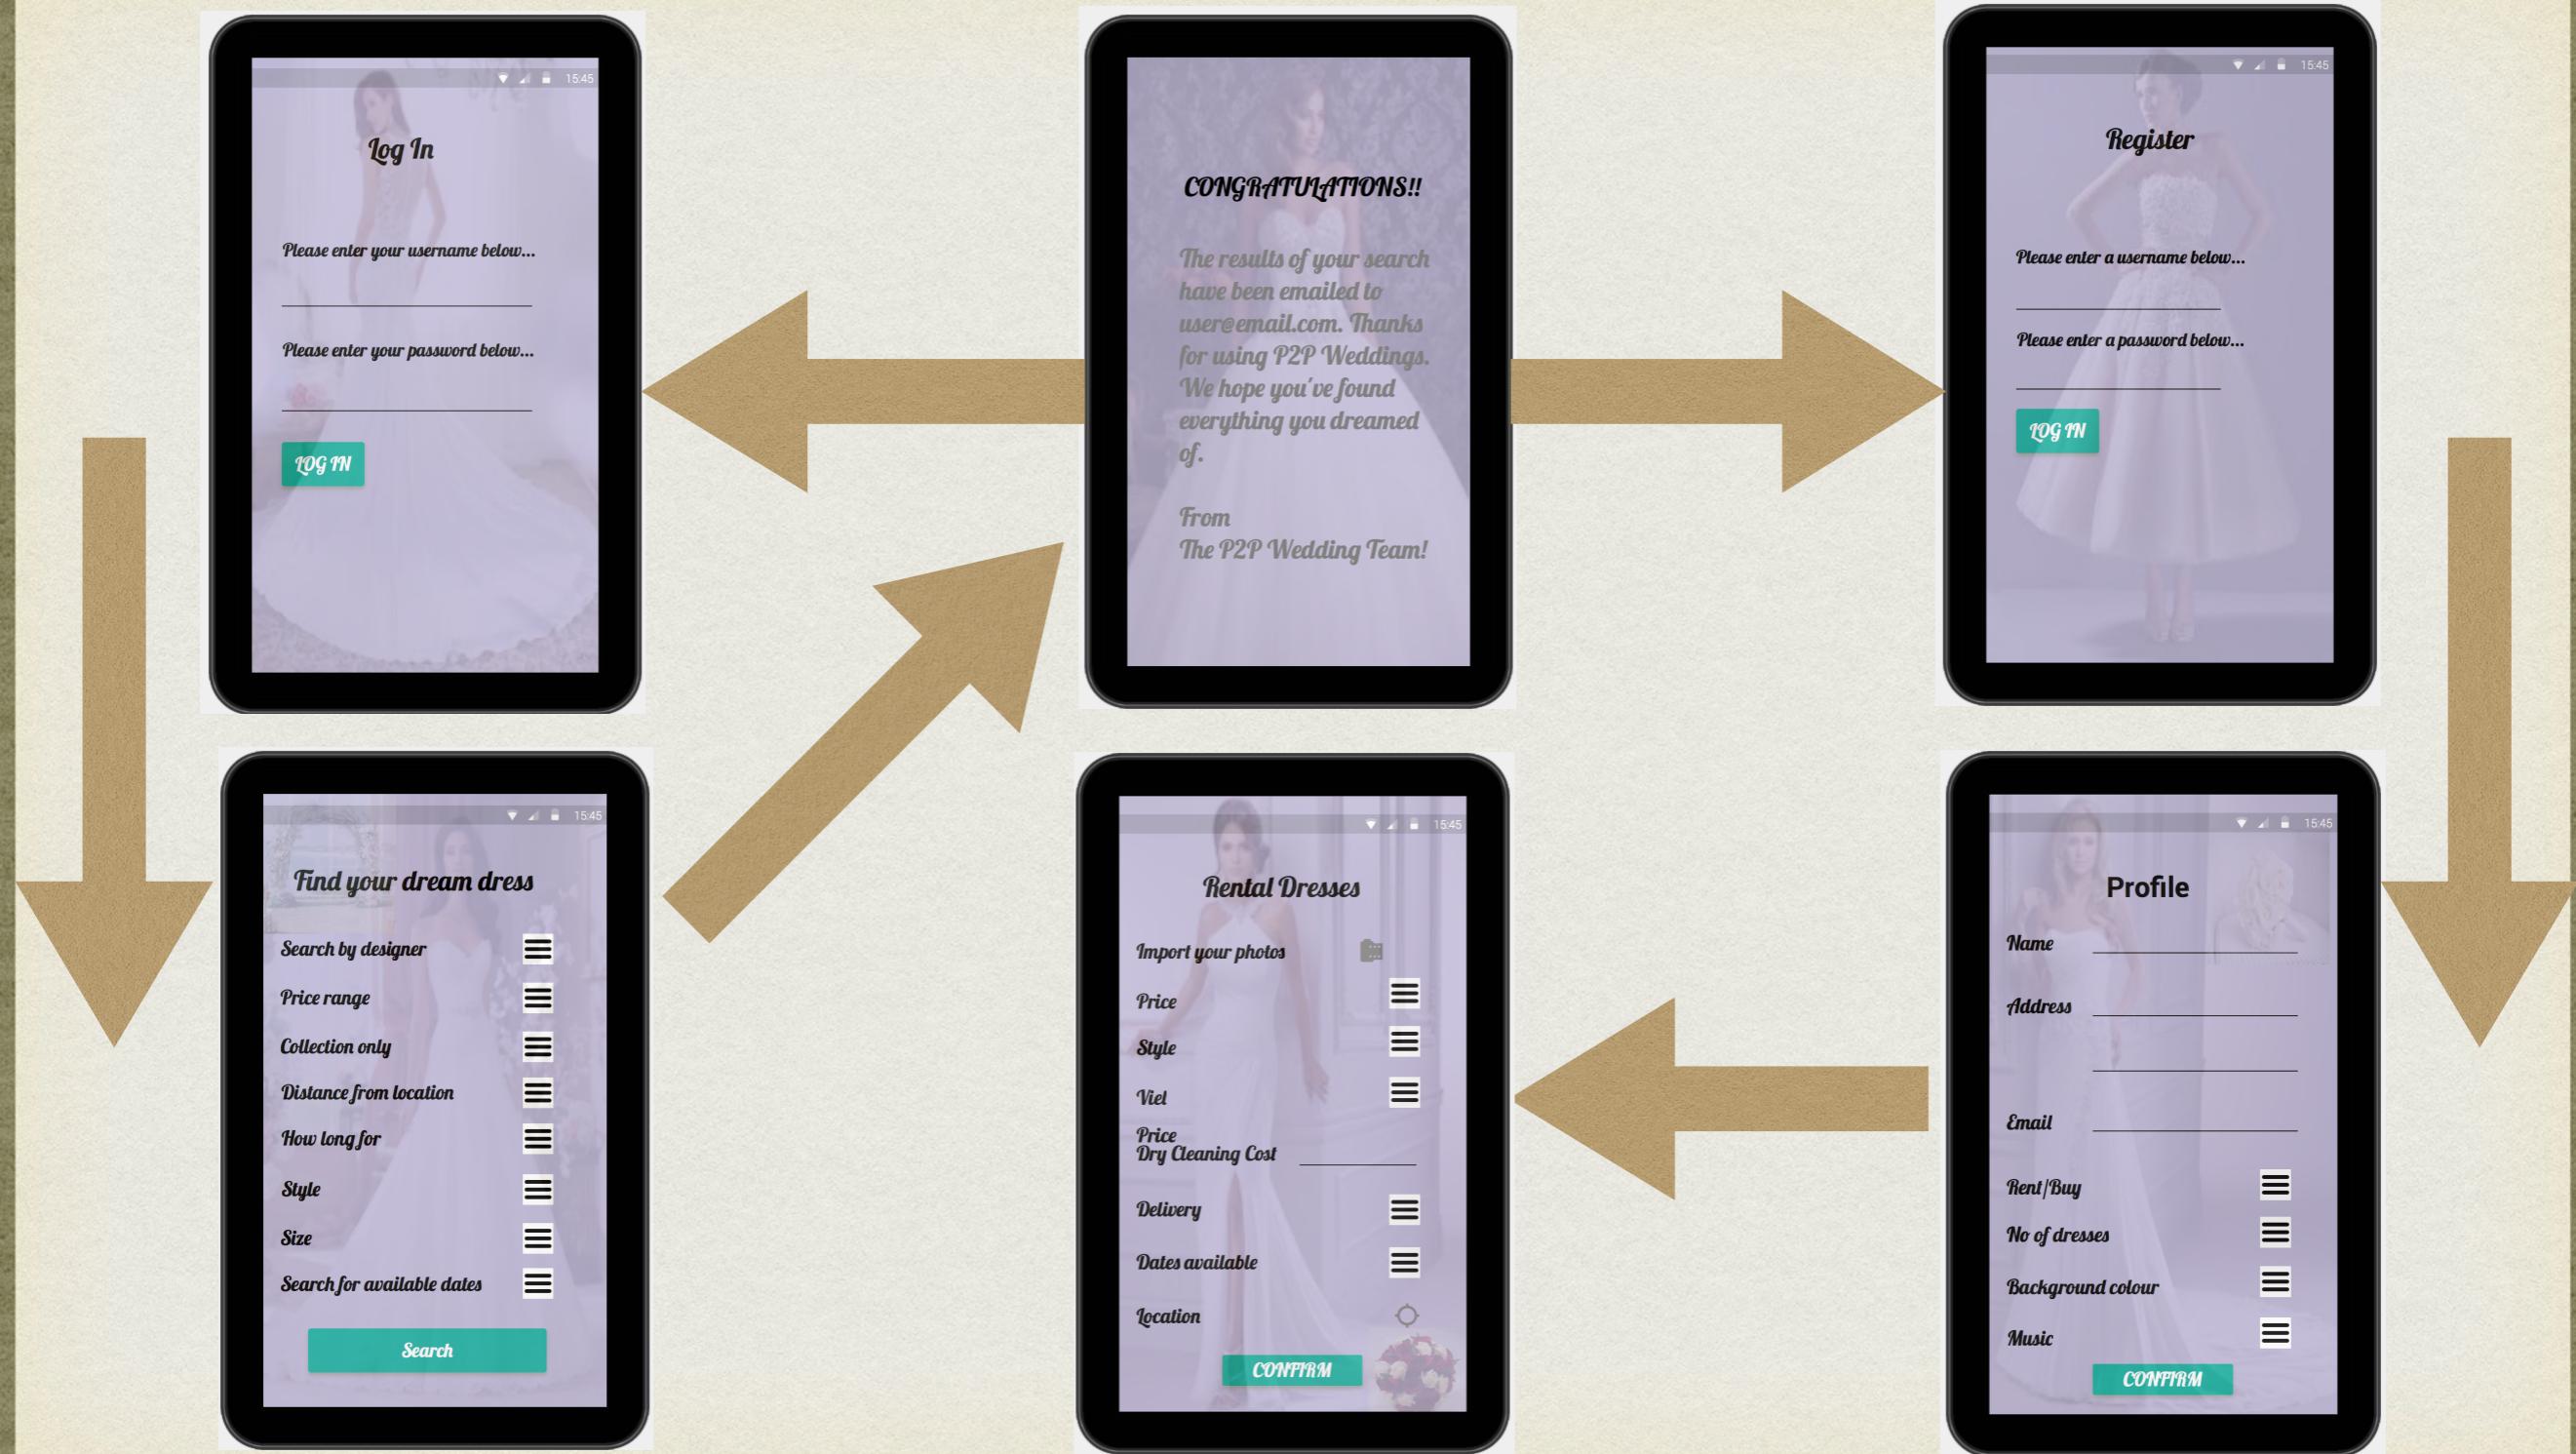

By Michael Heneghan

THE TEAM AND IDEA

- The Team - Michael Heneghan
- The Idea - A peer to peer service for renting wedding dresses.
 - Customers - Women with wedding dresses and brides-to-be
 - Benefits - married women can either recoup some of the wedding costs, and brides-to-be can get their dream dress at an affordable price
 - Market trends - Move toward bridal wedding dress rentals in past two years and reduction in average spend

THE DESIGN/UI

THE IMPLEMENTATION

- The implementation

- Custom themes - Change background colour and halt music, custom action bar, alternative languages (Spanish, French & German)
- Shared Preferences used to store username and password - Ability to sign in using Gmail and Facebook
- SQL Lite database storing wedding dress details, location and images and Content Providers for users to be able to search and view dresses in the database that match their required criteria
- Google maps to locate dresses closest to users address and the ability to use directions to plan a route
- Results returned to user via email along with necessary contact details.
- Initial splash screen with music, various activities and intents along with drop down options (spinners)
